GREENSMES

Enhancing SMEs' modernization and green innovation and transition towards successful sustainability by transnational collaborative practices and tools

Why GREENSMES?

Current production and consumption patterns pose serious challenges to human health and wellbeing.

Industries are modernising their production processes and organisational models in order to become greener, more resource-efficient and closer to consumer needs for greener products and services.

EU policies and market competition require small and medium-sized enterprises (SMEs) to adopt new technologies that align with the green transition.

DESIGN THINKING

Our vision

GREENSMES project aspires to develop and implement an integrated solution that will actively promote green innovation and will help businesses increase and improve their competitiveness in a tangible manner.

What can we do for you?

Join a directory of experts
showcase your knowledge, increase your visibility, and connect with a wider audience in the sustainability field

Enhance your capabilities
through targeted training and workshops designed for SMEs and BSOs

Expand your network and foster growth
by joining a transnational green initiative

Receive comprehensive support
to transform your green ideas into successful pilot projects
